

Solder Bath SB-PTC-200 D

In Electronics, Electrical and Automobile industry you come across where you have to carry out tinning operation. It may be component such as resistor, capacitor or stripped wire where lead-out ends are to be tinned or it may be stripped wire ends to be soldered or it may be wire ends of wiring harness, crimped lugs to be tinned. One can think of

various applications. We have developed various Solder pots depending on customer requirements.

This is temperature controlled solder pot with digital display of set as well as actual temperature. Temperature can be set by changing setting on display as required.

Pot Shape	Round
Pot Dimensions in mm	50 X 45 deep
Wattage	400 W
Solder Capacity	0.7 Kg
Temp. Range	200° C to 450° C

Applications:

- Component Lead Tinning.
- Tinning of stripped PVC wires.
- Soldering of Self-solderable wires.
- Wiring harness ends in automobile industry.
- All these pots can be used with lead free solder also.

Note:

- PTC Models are temperature controlled.
- Temperature controlled within $\pm 5^{\circ}\text{C}$ of set temperature.
